

# Microhumic

**Contents:** Micronized, Oxidized Lignite (Humate) - 70% Humic Acid Grade

Mixing Instructions for Microhumic:

Microhumic may be mixed with plain water or with a tank mix of liquid fertilizer. Native pH of the product is 3.7, making it compatible with most liquid fertilizers. Application rate is 2-3 lbs. per acre for most crops.

**Note: Microhumic is very compatible and achieves good agronomic results, however, the product does not remain in suspension and may pack in the bottom of the mixing vessel if allowed to settle. For a Suspendible product, please use Micromate.**

**Caution:** Dust hazard. Use eye protection & particulate respirator when handling dry material.

Physical Characteristics:

5% to 8% moisture

Bulk Density 0.85 - 1.0 grams/cc

Particle Density 1.5 - 1.6 grams/cc

Particle Size Distribution:

Average particle size = 15 microns

100% less than 150 microns

98% less than 50 microns

50% less than 15 microns

25% less than 5 microns

3% less than 1 micron
